

ICEmobile : Large View

This page last changed on Jan 17, 2013 by [philip.breau](#).

largeView

The largeView component is used to specify markup that should be displayed in larger views, such as tablet and desktop views.

Usage

<mobi:largeView> will include and render the child components when the client is a desktop or tablet view.

```
<h:body>
  <mobi:largeView>
    <ui:param name="viewSize" value="large" />
    <ui:include src="WEB-INF/includes/view/large.xhtml"/>
  </mobi:largeView>
  <mobi:smallView>
    <ui:param name="viewSize" value="small" />
    <ui:include src="WEB-INF/includes/view/small.xhtml" />
  </mobi:smallView>
</h:body>
```
