

ICEmobile : QR Code Scanner

This page last changed on May 01, 2013 by [philip.breau](#).

scan

The scan component can be used to read a QR code. The ICEmobile container is needed for reading QR codes. The scan component will access the devices camera and try and read a QR code. If successful the decode qr code will be assigned to the backing bean.

The QR code library can only read QR codes that are black and white at this time.

Usage

```
<mobi:scan value="#{myBean.qrcode}"/>
```

Minimum Device Requirments

QR Code scanning on Android requires version 2.3.1+

Component Documentation
