ICEmobile

Welcome to the ICEmobile wiki. ICEmobile is a Java EE compliant framework for the development of hybrid mobile web applications. ICEmobile applications match the look and feel of native mobile applications, using pure web-based technique and standard Java EE presentation technologies like JSF and JSP. ICEmobile's device-optimized rendering engine ensures true cross-platform performance from a single application deployment, and hybrid and cloud capabilities within the framework enable application features not available in other web-based approaches.

Features

Read about all the key [ICEmobile Features](#).

Presentation Layer Technologies

The following Java EE presentation layer technologies are currently integrated with ICEmobile:

[JSF/ICEfaces](#)

Release Notes

[ICEmobile 1.3](#)
[ICEmobile 1.2](#)
[ICEmobile 1.1](#)
[ICEmobile 1.0](#)

Tutorials
