

ICEmobile : Video Player

This page last changed on Jan 17, 2013 by [philip.breau](#).

VideoPlayer

This component will make use of the <html5> video tag and the JSF properties listed below.

Usage

1. To use this component, first the mobility tag-lib namespace has to be added in your page:-

```
<html ... xmlns:mobi="http://www.icesoft.com/icefaces/mobile/component">
```

For the proper theming and markup based upon device, include the

```
<mobi:deviceResource/>
```

markup in the head of your template or facelet page. (this is currently necessary for blackberry not just for styling with this component).

- Static source

```
<mobi:videoPlayer id="videoFile" value="#{videoBean.pathToFile}" controls="true"
  preload="auto" />
```

- byte array loaded in session scope

```
<mobi:videoPlayer id="videoFile" value="#{videoBean.pathToFile}"
  linkLabel="Play"
  preload="auto" contentType="#{videoBean.contentType}" scope="session"/>
```

TagLib Documentation

This section covers attributes involved in the typical use-cases for this component. For reference, the complete taglib documentation for this component is available [here](#).
